Tenosar provides Services and Products across multiple industries and customers, including healthcare organizations, the Department of Defense, Veterans Affairs, Governments, & private companies. Our capabilities are in four primary core competencies of evolving services and products:

## Core Competencies

### 1. Administrative Management, Logistics & Operational Support:

Technical experts & engineers with decades of experience in operational solutions, logistics, program management, strategic & tactical planning. Present contracts in Logistics, Medical support and Operations. Certified Instructors, K-12 thru University & Curriculum Developers.

### 2. Professional Medical Solutions:

The Tenosar team has over 40 years of combined healthcare experience, including more than 18 years in managing clinics and medical treatment centers. Experienced administrators that understand the complexities of HEDIS Measures, Medicare & the Managed Care Industry within the Department of HHS guidelines. Our Staff & consultants include physicians and healthcare technical experts experienced with existing healthcare organizations.

### 3. Information Technology & Systems Design:

Research & Development (R&D): Our software engineers have participated in designing an easily accessible and secure medical imaging & reports online system. The system enables healthcare providers, payers, radiology imaging companies & patients to have fast access to real-time patient diagnostic images & reports. Experience developing software for Defense, Government, healthcare, and simulation training. We have performed extensive R&D in simulation software for the US Army Synthetic Training Environment. We know and use artificial intelligence to solve complex issues.

### 4. Value-added Reseller (VAR):

Installation, Configuration, Training, Technical support, and Design.
